

Dragon Medical One

Cloud-based medical speech recognition

Dragon Medical One is a flexible and highly available cloud solution for professional medical speech recognition that can be used from anywhere. Thanks to artificial intelligence and an extensive specialised vocabulary, Dragon Medical One enables you to achieve the highest recognition accuracy for both medical and general texts. You dictate your texts directly where they belong, for example in the practice or clinic information system. This saves time, shortens processing times and reduces the workload on staff. For the highest recognition accuracy right from the start, we also recommend using our specialised medical vocabulary Voicepoint Argon® Lex.

The Dragon Medical One solution is hosted on the secure Voicepoint Cloud in Switzerland. Thanks to the software-as-a-service model, large investments are no longer necessary. Voicepoint Cloud customers benefit from maximum availability, security and performance with minimal effort and predictable costs.

Your benefits at a glance

Increased productivity, financial savings and massive time savings for you

Your employees will spend less time on administrative tasks and have more resources for their core tasks.

Patients take centre stage

The application is available at their workplace, regardless of location. This allows you to concentrate on treating and caring for your patients.

Voice commands and automation for even more time savings

Save valuable time by creating voice commands that you can use to automate numerous actions. Benefit from even more convenience by assigning commands and actions to the buttons on the dictation microphone.

Speed, precision and adaptability at all times

Benefit from fast and responsive speech recognition that delivers maximum accuracy right from the start – including when recognising different accents and in German, French, Italian and English. This enables you to create more detailed reports in higher quality in less time. Dragon Medical One includes an extensive medical vocabulary, enabling efficient and accurate documentation. What's more, you can enhance the software with the customisable vocabulary adaptation Voicepoint Argon® Lex. By analysing your existing documents, the software is tailored precisely to your area of application, ensuring even greater recognition accuracy.

Simplified installation, use and management

Easy configuration, quick installation and updates: everything is designed to make the work of your IT and employees easier and to ensure a quick start-up – without the need for extensive training. Voice-controlled data entry is done in the Dragon Medical One dictation window or directly in the practice or clinic information system and various Windows applications.

Flexible choice of input devices – whether you're on the road or in the office

You can use a variety of input devices for speech recognition. Dictate using a dictation microphone or, headset – the solution will transcribe your dictation into text with a high level of recognition accuracy.

First-class protection with ISO certifications

We guarantee an enhanced level of protection through our ISO 27001 and 27701 certification for information security and data protection.

Swissness is in our DNA

Our [Voicepoint Cloud](#) is hosted entirely in Switzerland; no data is transferred abroad.

Our additional modules

You are welcome to use the additional modules developed by us in Switzerland to supplement Dragon Medical One.

Winscribe Dictation

With our additional dictation management solution Winscribe, you can also map various workflows tailored to your environment and incorporate flexibility into your workflow through foreground and background speech recognition. You can even use a mobile dictation device – Winscribe is able to transcribe your dictation automatically into text, thanks to the linking of Dragon Medical One and Winscribe.

Voicepoint Argon® Identity

Voicepoint Argon® Identity offers a centralised and automated user management system that perfectly complements the Nuance Management Center (DMO and DPA/DLA) and the Winscribe Dictation software. Users can be managed automatically via an Active Directory connection, allowing for flexible and efficient user management and licensing.

Voicepoint Argon® Lex

The Voicepoint Argon® Lex specialised vocabularies are the perfect addition to Dragon speech recognition. With Voicepoint Argon® Lex, we support you in managing your vocabulary and autotexts.
