

Voicepoint Xenon®

Our Swiss platform, Voicepoint Xenon®, for medical speech recognition, dictation, and Ambient Scribe was specifically developed to reduce the workload of healthcare professionals and to increase the efficiency and flow of medical documentation. And all of this is fully tailored to your needs.

Coverage of all relevant use cases in medical documentation

Our platform is modular. You decide what you need. Voicepoint Xenon® puts you at the center and enables the creation of patient documentation in various ways:

Voicepoint Xenon® Flow

Voicepoint Xenon® Flow provides central management of users, licenses, and recordings within the Voicepoint Xenon® platform. Included in Voicepoint Xenon® Flow is the ability to capture digital recordings directly on a smartphone or tablet, as well as to process and manage those recordings via the web.

This perfectly sums up 20 years of experience in speech-based medical documentation:

- Centralized management of your users
- Direct recording via App (iOS / Android)
- Recording mode freely selectable (insert, overwrite or attach)
- Easy forwarding of audio and text content to the secretary's office
- «Note to me» function for personal audio recordings
- When combined with Voicepoint Xenon® Dragon: Automatic speech recognition for quick correction instead of transcription – even retroactively

- Compatible with mobile dictation devices from Philips and OM SYSTEM
- Web-based and platform-independent availability

Voicepoint Xenon® Dragon

With Voicepoint Xenon® Dragon, you bring your Dragon Medical One speech profile to your smartphone or tablet. You dictate the desired text into the integrated microphone and receive the recognized text in return, which you can transfer to any third-party system. In doing so, you use your trained profile (including vocabulary and Auto-Texts) directly on your smartphone and benefit from your existing speech profile – fully independent of the operating system and device, from Windows to macOS (Voicepoint Helium®).

Voicepoint Xenon® Fusion

Creation of summaries and transcripts of consultations using Ambient Scribe

Voicepoint Xenon® takes medical documentation to the next level: During the consultation, the conversation is recorded. Afterwards, the AI model developed specifically for the healthcare sector by Corti generates a structured summary of the content. The summary is flexible and can be tailored to your specific requirements. What makes it special: the AI model is trained with Swiss data and understands multiple languages, including English, French, German, Italian, as well as Swiss dialects.

What if a patient does not consent to the recording of the consultation?

That's one of the major advantages of our platform: Unlike competing products, Voicepoint Xenon® doesn't rely solely on consultation recordings. It also includes the «classic» features such

as speech recognition and dictation management. This way, we offer healthcare professionals maximum flexibility.

Voicepoint Xenon® – the only platform on the Swiss market that:

- Uses a healthcare-specific large language model (LLM)
 - Follows a modular, platform-based approach
 - Covers all relevant medical applications
 - Is hosted in a Swiss cloud
 - Can be fully integrated into clinical systems
 - Meets the high standards of data protection and information security in the Swiss healthcare system
- **Complete end-to-end solution**
Consulting, training, implementation, support
 - **Seamlessly integrated into the PIS and HIS**
From conversation to document storage
 - **Maintains productivity even during staff shortages**
Maintains high productivity
 - **Multilingual**
English, French, German, Italian, as well as Swiss dialects
 - **Flexible alternatives with Voicepoint Xenon® Fusion**
No consent, no problem: you can switch to Voicepoint Xenon® Dragon or Voicepoint Xenon® Flow

12 reasons why you should choose Voicepoint Xenon®

- **Tailored platform**
For all use cases of medical documentation
- **Time savings**
Reduction of documentation time
- **Increased patient satisfaction**
Faster reporting, improved patient experience
- **Availability**
On desktop, tablet, or smartphone
- **Reuse of your user profile**
DMO/Voicepoint Helium®
- **Swiss Cloud**
Highly available, secure, and platform-independent
- **Development and hosting**
Fully based in Switzerland

Data protection and information security

Confidentiality, integrity, and availability are at the core of our platform. Voicepoint Xenon® is hosted on the Swiss Voicepoint Cloud, and data is never transferred outside of Switzerland. The most important data protection and information security standards are met through ISO certifications 27001, 27701 and 27018, which are continuously renewed and provide an enhanced level of protection for customer data. Voicepoint Xenon® excels in several different security aspects, including:

- Biometric login
- 2-factor authentication
- Encryption of all communication
- Encryption of sensitive health data
